Console and Auxiliary Port Signals and Pinouts

The console port is configured as data communications equipment (DCE), and the auxiliary port is configured as data terminal equipment (DTE). The console and auxiliary ports both use RJ-45 connectors. RJ-45-to-DB-25 adapters are available for connection to modems and other external communications equipment. Both ports are configured as asynchronous serial ports.

Following are the pinouts for the console port (see Table A-1), the auxiliary port (see Table A-2), and the adapter (see Table A-21):

Table A-1 Console Port Pinouts (RJ-45)

2	DTR	Output
3	TxD	Output
4	GND	–
5	GND	–
6	RxD	Input
7	DSR	Input

BRI Port Pinouts

The pinouts for the BRI interface port appear in Table A-3.

Table A-3 BRI Port Pinouts (RJ-45)

Pin ¹	TE ²	NT ³	Polarity
3	Transmit	Receive	+
4	Receive	Transmit	+
5	Receive	Transmit	–
6	Transmit	Receive	–

1. Pins 1, 2, 7, and 8 are not used.
2. TE refers to terminal terminating layer 1 aspects of TE1, TA, and NT2 functional groups.
3. NT refers to network terminating layer 1 aspects of NT1 and NT2 functional groups.

Caution To prevent damage to the system, make certain you connect the BRI cable to the BRI connector *only* and not to any other RJ-45 connector. The console, auxiliary, and BRI ports all use RJ-45 connectors.

Warning Network hazardous voltages are accessible in the BRI cable. If you detach the BRI cable, detach the end away from the router first to avoid possible electric shock. Network hazardous voltages also are accessible on the system card in the area of the BRI port (RJ-45 connector), even when power is turned OFF.

Serial Cable Assemblies and Pinouts

The following illustrations and tables provide assembly drawings and pinouts for the EIA-530 DCE, and EIA/TIA-232, EIA/TIA-449, V.35, and X.21 DTE and DCE cables.

Note All serial cables have a DB-60 connector on the router end. The following pinouts represent only the router ends of the cables. Because of the small pins on the DB-60 connector, manufacturing and soldering these cables yourself might be very difficult and is not recommended.

EIA-530

Figure A-1 shows the EIA-530 serial cable assembly, and Table A-4 lists the pinouts. Arrows indicate signal direction. A right arrow (—>) indicates DTE to DCE, and a left arrow (<—) indicates DCE to DTE.

RJ-45 Adapter Pinouts

Refer to Table A-21 for a list of the pins used on the RJ-45 connector, the male/female DTE adapter, the male/female DCE adapter, and the male modem adapter used to connect terminals and modems to Cisco 2500 series products. The connection of pins between the RJ-45 connector and the end device depends on the type of cable used, either straight or rolled. A straight cable connects pin 1 to pin 1, pin 2 to pin 2, and so on. A rolled cable connects pin 1 to pin 8, pin 2 to pin 7, and so on. Cisco 2500 Series products now ship with a rolled cable. Refer to Table A-22 for the cable and adapter configurations that can be used to connect terminals and modems to Cisco 2500 series products. Table A-23 and Table A-24 list the suggested adapter pinouts.

Table A-21 Pins for the RJ-45, M/F DTE, M/F DCE, and MMOD

8	5	4	4

1. The FDTE adapter that is available through Cisco is labeled "Terminal."

2. The MMOD adapter that is available through Cisco is labeled "Modem."

1. An octal cable or RJ-45 breakout cable is equivalent to a rolled cable.

2. Modify the adapter by removing DB-25 pin 6 and placing it into the pin 8 position.
